

Services to fisheries & ships

HD has always had a strong connection to Icelandic fisheries. The fishing fleet has undergone a major renovation in recent years and with increased technological advancements, the focus is on maintenance services of a wider range than before. As ever, the service needs to be well prepared for each stay in harbor and spare parts available as well as personnel so that short stops are well utilized for maintenance and repair. Our offices in Kópavogur, Vatnagarðar in Reykjavík, Akureyri and Eskifjörður have carried out spare parts and maintenance services for the fishing industry for many years.

- **Steel work**
 - *Extensive and specialized knowledge of steel shipbuilding.*

Safe, smart, and sustainable solutions trigger increased operational security

Services & products to fishmeal production

To enhance services to the fishmeal industry, we have partnered with Haarslev and AlfaLaval, the world's leading companies with equipment for fish- and meat meal production. HD can, in partnership with Haarslev and Alfa Laval, offer equipment for meal production, whether in ships or traditional land bases factory, making fishmeal from pelagic fisheries or fish farms.
